Outpatient Services Reimbursement to Increase 3%

BY ALICIA AULT

Hospitals will get an average 3% increase in outpatient service payments under a final rule issued by the Centers for Medicare and Medicaid Services in early November.

But CMS will reimburse for implantation of some devices—mostly because of growth in volume and intensity of services. The increase in costs affects not only Medicare’s overall budget but also seniors’ pocketbooks due to the 25% copayments for outpatient services, according to the agency.

However, the agency only decreased payments in a few areas, for instance, cutting reimbursement by 3%-9% in 2007 for implantation of some neurologic devices.

CMS has expressed concern that outpatient costs are rising precipitously—an estimated 12% in 2005 and 9% in 2007—mostly because of growth in volume and intensity of services. The increase in costs affects not only Medicare’s overall budget but also seniors’ pocketbooks due to the 25% copayments for outpatient services, according to the agency.
