

### ERRATUM

In the July, 1963, issue of this journal, the enema referred to in the paper entitled "The Pathogenesis of Ulcerative Colitis; Apparent Precipitation of Acute Episodes by Standard Enemas," on pages 155, 156, 157, 158, mistakenly included milk of magnesia. The correct formula of the enema is: magnesium sulfate, 50 percent solution, 2 ounces; glycerin, 2 ounces; water, 3 ounces.
